

„Science in the City: From Co-Existence to Co-Creation“

Duration: 6 hours, either on one day if offline, or split over two days if online

Target group: Early career researchers that are interested in collaborations with local actors from outside academia: policy makers, citizens, economy, NGOs

Facilitation Language: English or German

Content

- Introducing “Cities of Scientific Culture”: Best practice examples of innovative actions and strategic networks between stakeholders from academic institutions, cities and regions in Europe
- Benefits, challenges and barriers of public communication of research in local and regional contexts
- Role and responsibilities of researchers in public dialogues
- Best-practice examples from dialogue-oriented science engagement activities across Europe
- Interactive part of the workshop: Design a dialogue-oriented communication strategy for your research project: Think about stakeholders to involve, target groups to reach and formats to apply
